SUPPLEMENT

1. On 1 June 1946, the Khabarovsk aircraft factory started manufacture of four-engine bombers. Each engine has 1200 horsepower. The plane has a speed of 452 miles per hour and a bomb load capacity of 3½ tons. The Chinese name for this Model is Pi Tich Pei (平底倍). The factory employs about 4800 workers including 1630 Germans. The factory authorities spread propaganda among the workers such as a prediction that Russian parachute troops will be able to land in Alaska when 20,000 of these bombers are completed.
2. The Khabarovsk shipbuilding factory is now in full production, and is building naval landing craft. Up to the end of September 1946, 1064 of these craft had been completed. About 2300 workers are employed in the factory.
